

NewtonWorks and Sondel Engineering Collaborate To Extend European Presence of eSeal

[Tokyo, Japan, 26 March 2025] – NewtonWorks Corporation and Sondel Engineering are proud to announce their official collaboration, furthering the European expansion of [NewtonWorks eSeal](#), an easy-to-use tool designed to revolutionise rubber seal and weather strip analysis.

[Sondel Engineering](#) will act as the European distributor of eSeal, a tool designed for busy design engineers. With their specialised knowledge in rubber seal development, combined with over twenty years of product expertise from NewtonWorks, the partnership will provide strong support to European seal manufacturers, helping to improve their development efficiency and performance while increasing their market competitiveness.

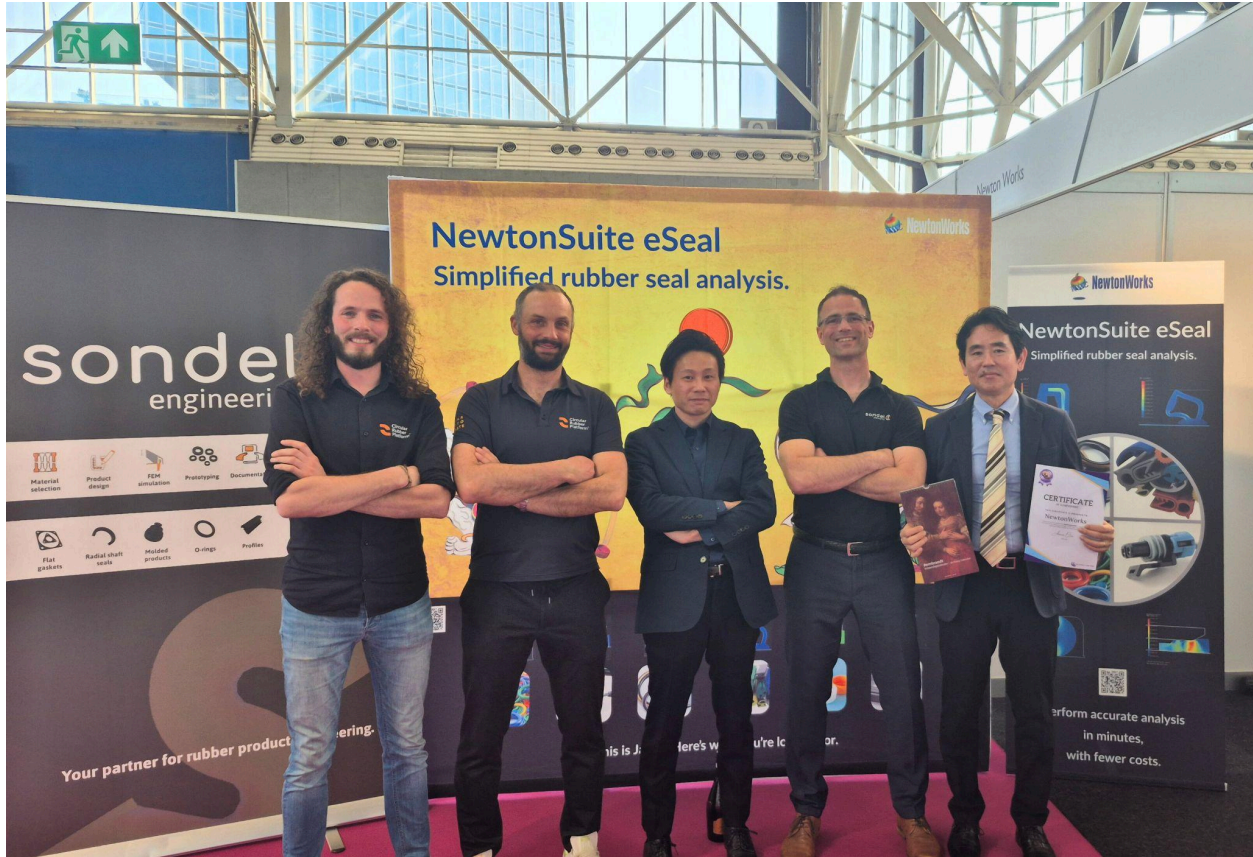

This news comes after a successful [European launch of eSeal](#) and being [awarded “Most Innovative Product”](#) during the awards ceremony at The Gasket & Seals show. **Naomichi Taketa, Account Manager at NewtonWorks Corporation**, shares,

“Our collaboration with Sondel Engineering will help to deepen customer relationships and build continued trust with our European partners. As simulation specialists, NewtonWorks offers years of expertise in building world-class CAE software solutions. Although we’ve built ties with European partners previously, working with Sondel Engineering, as a group of localised experts, will further accelerate our European expansion of eSeal.”

Jan Boomsma, Managing Director at Sondel Engineering, adds,

“With our knowledge of rubber seal design, we understand that eSeal is a valuable tool saving brand owners, seal producers, and engineering companies time and costs. The time to market developments will be shorter by manufacturing the right seals the first time. Sharing knowledge is key in developing new products today; therefore, we’re happy to bring eSeal to our existing and new customers.”

NewtonSuite eSeal is available across the European market, providing companies with a revolutionary tool for performing rubber seal and weather strip analysis. **Visit the website for more information about eSeal or [download informational materials](#).**

About NewtonWorks

[NewtonWorks Corporation](https://www.newtonworks.com) delivers world-class CAE software solutions through strategic partnerships with top developers. With extensive expertise in 1DCAE and 3DCAE technologies, NewtonWorks supports manufacturing clients in building optimal systems for their business, from initial concept to final production.
